

Application Example:

Operating a PTZ camera with a mobile device

C-MOR

Application area and function

Various enterprises own production halls that are run by multi-shift operations. In many cases production runs 24/7 but production managers cannot be present all the time. C-MOR- Video enables you to check with a mobile device like a handheld device (Windows Mobile, Palm, mobile phone, etc.) that everything is all right. For this purpose C-MOR-Video offers an interface for mobile devices with PTZ functions. By this means a PTZ camera can be easily operated via mobile device. The camera can either be panned, tilted and zoomed or operated in a pre-defined position. With only a click the camera focuses on the assembly line, with another click on machine number 2 etc.

By this means a complete production hall can be effectively monitored from outside or on the road by one or two cameras.

Used components

C-MOR3P, Linksys DSL router, Sony RZ25P PTZ cameras

Operating a PTZ camera while being away
