

New IP video server version available: C-MOR 3.12

New Edition of High Performance Video Surveillance: C-MOR Version 3.12

Lake Forest, California, Dec. 15th, 2008

C-MOR Inc., leading provider of web-based video surveillance solutions, announces the launch of the new version 3.12 for this week. This new release repeatedly shows that constant development and spirit of innovation is top priority at C-MOR Inc. Their customers also have to count with groundbreaking innovations in the future.

One of the new version's highlights is "permanent recordings in single frame mode": this feature enables users to record and save single frames during predefined intervals. Images can be accessed over the web interface or downloaded as a ZIP archive. This offers the possibility to always keep track of things happening at low data volume.

Another highlight is two high-quality Panasonic cameras that have been added to the menu after extensive testing:

WV-NS202, the Super Dynamic III Dome Color Camera with PoE (Power over Ethernet). This model can be easily controlled as PTZ over C-MOR's interface. Please visit <http://www.c-mor.us> and test the PTZ functionality under the "Test now" menu with camera #4.

WV-NP240, a stationary network camera offering a variety of features such as PoE, PTZ, 120x digital zoom and 22x optical zoom.

C-MOR users already working with version 3.0 or higher can easily download the latest version over the upgrade function on C-MOR's web interface.

Please visit www.c-mor.us to learn more about C-MOR IP video.

About C-MOR:

Since 2003 the video surveillance solution C-MOR has been convincing users on the international market. Numerous features have been constantly developed to meet increasing demands of customers. Excellent performance, reliability and stability characterize the innovative solution. Features like remote access from all over the world, alarm functions, motion detection, hard drive storage management etc. are standard.
