

More flexibility for users with new C-MOR camera license model

New Camera License Model: za-internet offers C-MOR users more flexibility

Tuebingen/Hechingen, Germany October 26th, 2009

za-internet - expert for video surveillance solutions – has just announced the launch of a newly developed license model for all C-MOR3, C-MOR6 and C-MOR9 solutions. The new licensing model enables C-MOR users to extend their system and add more cameras according to their actual requirements by a simple software upgrade.

By the help of the license model C-MOR3M+ and C-MOR3P+, the customer is able to operate his video surveillance solution with up to 15 cameras of his choice after a user-defined update. The smallest package C-MOR3M and C-MOR3P, which used to be limited to a maximum of three cameras, can now easily be upgraded according to the actual needs. “Naturally, due to the increased data volume, it is not possible to convert a C-MOR3P+ into a 15-camera model by the license upgrade. But the new model offers our customers more flexibility and a cost-effective possibility to increase their system’s capacity”, says Peter Steinhilber, CEO and founder of za-internet GmbH.

The upgrading option is, of course, also available for the packages C-MOR6 and C-MOR9. Both video surveillance solutions can be easily updated with the respective “+” versions.

The camera upgrade is very easy and user-friendly: the license key can be purchased over an authorized dealer and is sent by email. The upgrade is then carried out over the Internet by using the key, and cameras will be subsequently added. The only technical requirement, just as in the case of software updates for C-MOR, is Internet access.

Besides this innovative further development, that offers C-MOR users improved application possibilities on the basis of the cameras actually needed, za-internet has implemented numerous new camera models. The firmware now includes the majority of LevelOne cameras and PTZ control has been expanded by Axis models. In addition in the new “+” version, bugs have been fixed and administration over some web menus has been improved.
