

Energy-saving, silent and cost-efficient - the new fanless C-MOR video surveillance model by C-MOR Inc.

C-MOR3M - Innovative Power-Saving And Low-Noise Video Surveillance

Lake Forest, California, April 15th, 2009

C-MOR Inc., provider of intelligent video surveillance solutions, launches the newly developed fanless system C-MOR3M.

The sophisticated, innovative construction now also enables fully operational direct surveillance and digital recording without fan. The user is able to use all advantages of the fanless cooling without any restriction of functionality during video surveillance.

The device does not only stand out due to low noise level. The choice for energy-efficient components results in cost-efficiency by lowering energy consumption. The fanless energy saving model with only 28-watt power consumption guarantees low operation costs.

The fanless device also scores with the advantage that it can be operated in dust-sensitive areas. Conventional solutions with fans disperse dust, germs and bacteria, which constricts the use in hygienically sensitive areas. The fanless model C-MOR3M solves this problem and is also the ideal partner for video surveillance in areas concerned.

Another innovative change that comes with the C-MOR3M is the replacement of the second network port with a second menu item in the boot menu, responsible for the reset of the IP configuration. Now both, start of device and reset of IP configuration, can be carried out from the boot menu.

Besides the advantages of fanless operation, C-MOR3M also offers various characteristics like the use of up to three network cameras, motion detection with alarm by SMS or email, automatic FTP backup, support of mobile devices with PTZ functions and many more.

Please find more details about the web-based video solution C-MOR3M under: www.c-mor.us/c-mor3m

Low interference, low noise level, cost effectiveness and absolute reliability make C-MOR3M the ideal device for operation in security relevant areas.

About C-MOR:

Since 2003 the video surveillance solution C-MOR has been convincing users on the international market. Numerous features have been constantly developed to meet increasing demands of customers. Excellent performance, reliability and stability characterize the innovative solution. Features like remote access from all over the world, alarm functions, motion detection, hard drive storage management etc. are standard.
