

C-MOR-Video – New Version 3.11

## **Quick And Very User-Friendly: Video Scene Auto-Preview**

Lake Forest, October 4th, 2008, today, C-MOR Inc. – since years successful provider in the area of innovative video surveillance software – starts delivering the new C-MOR-Video auto-preview technology.

It has never been a problem to find recordings with C-MOR-Video quickly. But now the search for video sequences is even more effective by the help of the new auto-preview technique.

Many occurrences in front of a camera result very quickly in a long list of videos based on motion detection. The C-MOR feature of connecting single recordings already improved the search a lot. The new scene-preview function is again another big enhancement in the search for individual scenes.

Just by choosing the camera with the requested view and moving the mouse over the single video sequences the initial pictures of the recordings are automatically shown. The user is immediately able to identify what is behind the occurrence recorded. To see if it was just an employee who left the office late or if it is something that brings the user to watch the complete sequence with a click.

C-MOR is still sticking to its strategy: there is again no need to install any software for the new feature on the computer. There is no need of ActiveX and Java in order to use all functions of C-MOR video.

C-MOR customers already working with version 3.0 or any higher release can now easily upgrade online in order to be able to use the advantages of the brand-new version as soon as possible.
