

Version 3.60 Provides New iPhone Web Interface

C-MOR Supports iPhone without Installation of Apps

Lake Forest, California, January 14th, 2010

Today C-MOR Inc., renowned expert in the field of IP video surveillance, announces the new version 3.60 of the high-tech server solution C-MOR [see more]. The new version's highlight is a new iPhone web interface that can be instantly used without any need for the installation of software.

New iPhone Web Interface

C-MOR has been supporting mobile devices, such as mobile phones, smart phones and handhelds, already since years. This support mainly includes the functions live images, motion detection and permanent recordings. The latest feature, that has just been launched, is the new interface for the iPhone. The new functions include a web interface that has been especially developed for the iPhone, the supply of the iPhone-compatible video format MOV as well as the option to receive MOV-videos directly by email.

„Even that everybody keeps talking about Apps we want to stick to our original plan of no necessary software installations. That is why we have developed the new version which now enables access for everybody without the use of an App”, says Michael Reuschling, CEO of C-MOR Inc. “C-MOR users can now easily use all functions with their iPhone by just accessing the C-MOR web address over the iPhone web browser.”

But C-MOR's strength does not show by camera live images but rather by providing a very easy and user-friendly way to access previous recordings triggered by motion detection or other events. With C-MOR 3.60 now also possible by iPhone!

Users already working with C-MOR version 3.0 or higher can easily access the latest version 3.60 over the upgrade function on C-MOR's web interface. For more information on the update, please visit the online forum under <http://www.c-mor.com>. Website visitors can also test an online demonstration under <http://www.c-mor.com> without registration.
