

Much more than just video surveillance: the new generation C-MOR 3.5 now available for the models C-MOR3T and C-MOR3M!

C-MOR Inc. presents high-tech at its best: C-MOR 3.5 - optimized performance with Java support, now on the market

Lake Forest, California, June 9th, 2009

This week C-MOR Inc. will launch the latest version of their video surveillance solution C-MOR 3.5 for the models C-MOR3T and C-MOR3M, a Java-based innovation that will be published after an intensive phase of development.

The update to version C-MOR 3.5 will be available starting today. High efficiency, versatility, platform portability and security make Java the ideal technology for C-MOR.

C-MOR Inc. soon recognized the advantages of Java for C-MOR and is now presenting it with C-MOR 3.5 for the two 3-channel solutions to their customers worldwide – all other models will be upgraded during the next few weeks.

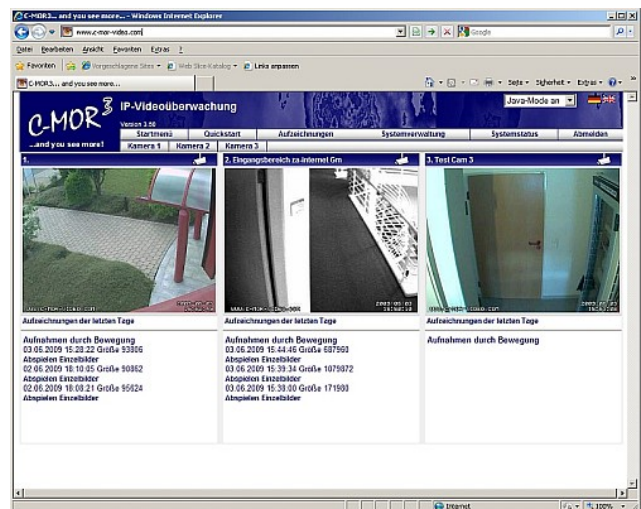

This new solution brings many advantages and is very user-friendly: the models stand out with lower system load and easier control of network resets by a the console if all network connections fail.

Besides, Java has a high impact on the quality of the live-stream – an even better image quality of all cameras offers the users a big plus point during surveillance by C-MOR.

The user can, of course, choose individually whether Java is set by default or not. The switch between Java and the traditional stream can be carried out during run time without any difficulty. With two different streams, C-MOR makes it possible for users to choose: high performance with Java or – as with previous versions – the traditional pull technique in case of low bandwidth.

Under <http://www.c-mor.us/demo> a test server for C-MOR 3.5, where all functions and advantages of the new technology can be tested, is available to customers as well as interested visitors.

C-MOR is one of the most high-performance video surveillance solutions on the market and has been developed to offer users the highest usability and effectiveness possible. Numerous functionalities and possibilities make C-MOR one of the top high-end products in the area of security and surveillance - even during the current crisis the manufacturer does not record any losses in sales.

Now with Java support: C-MOR3 web interface

C-MOR3T and C-MOR3M users already working with version 3.0 or higher can easily access the latest version 3.5 over the upgrade function on C-MOR's web interface and enjoy all advantages of the latest refinement.

About C-MOR:

Since 2003 the video surveillance solution C-MOR has been convincing users on the international market. Numerous features have been constantly developed to meet increasing demands of customers. Excellent performance, reliability and stability characterize the innovative solution. Features like remote access from all over the world, alarm functions, motion detection, hard drive storage management etc. are standard. C-MOR is a very reliable high-quality product, which is permanently developed further in order to meet the constantly growing needs of the market.
